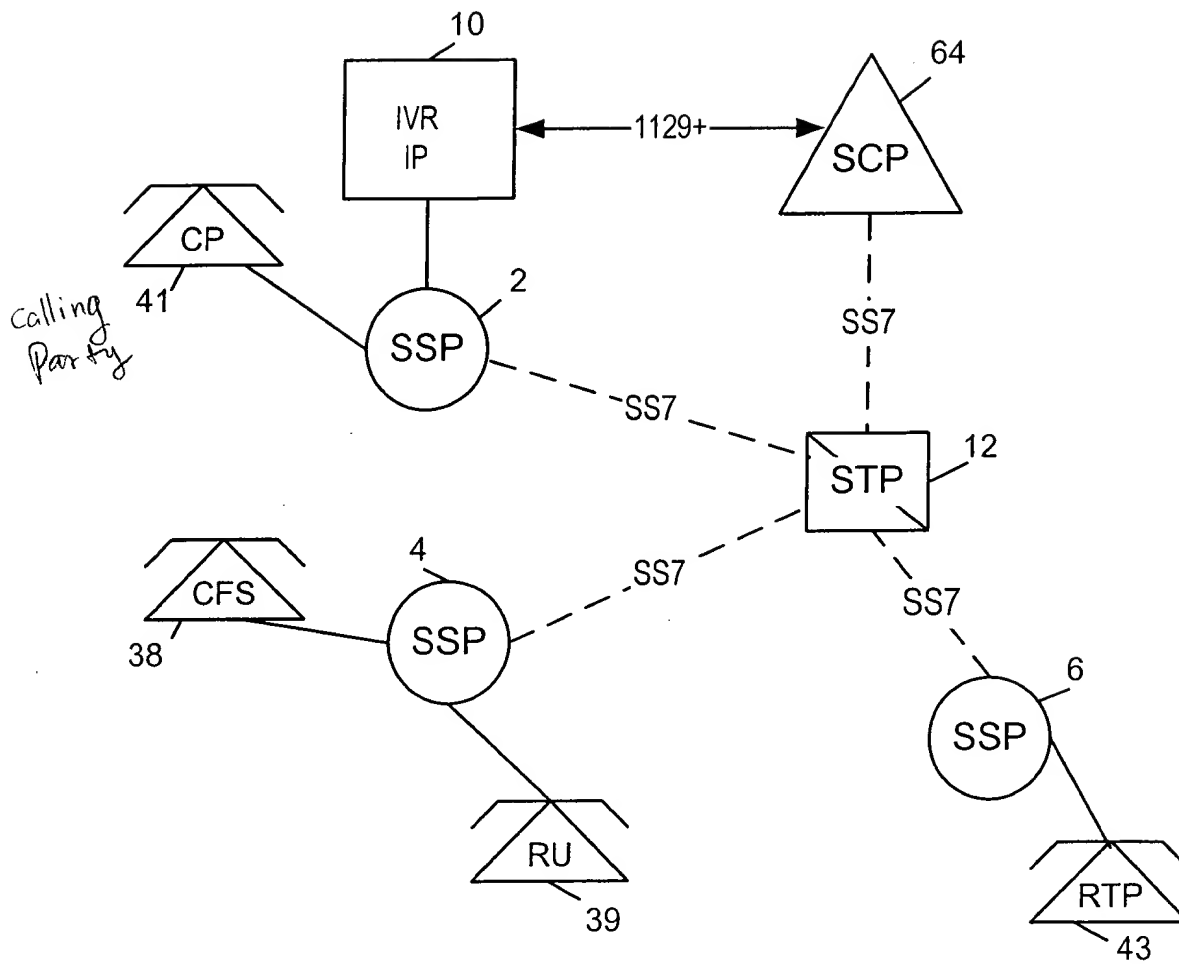

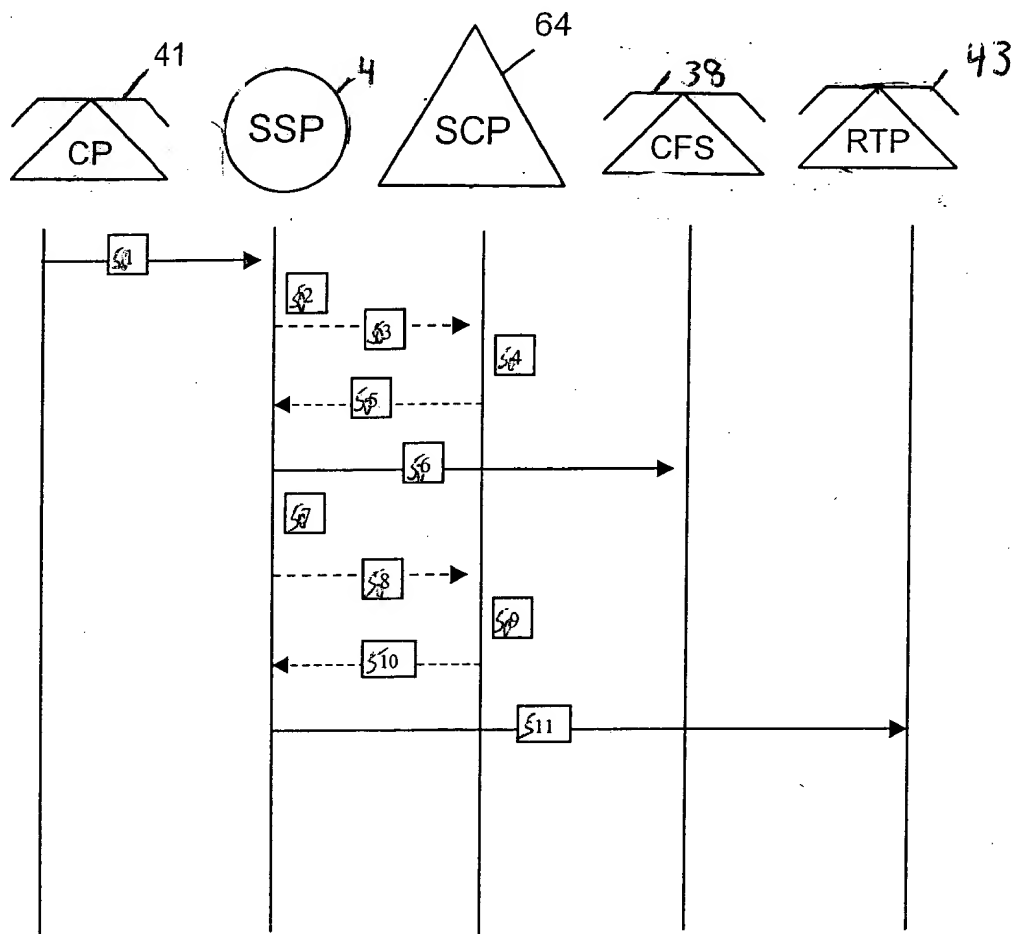

Fig. 3

The diagram illustrates a call setup sequence between a Calling Party and a Network. The participants are represented by vertical lines. The messages are as follows:

- Message 1:** A solid arrow from the Calling Party to the Network.
- Message 2:** A dashed arrow from the Network to the Network.
- Message 3:** A dashed arrow from the Network to the Network.
- Message 4:** A solid arrow from the Network to the Network.
- Message 5:** A solid arrow from the Network to the Network.

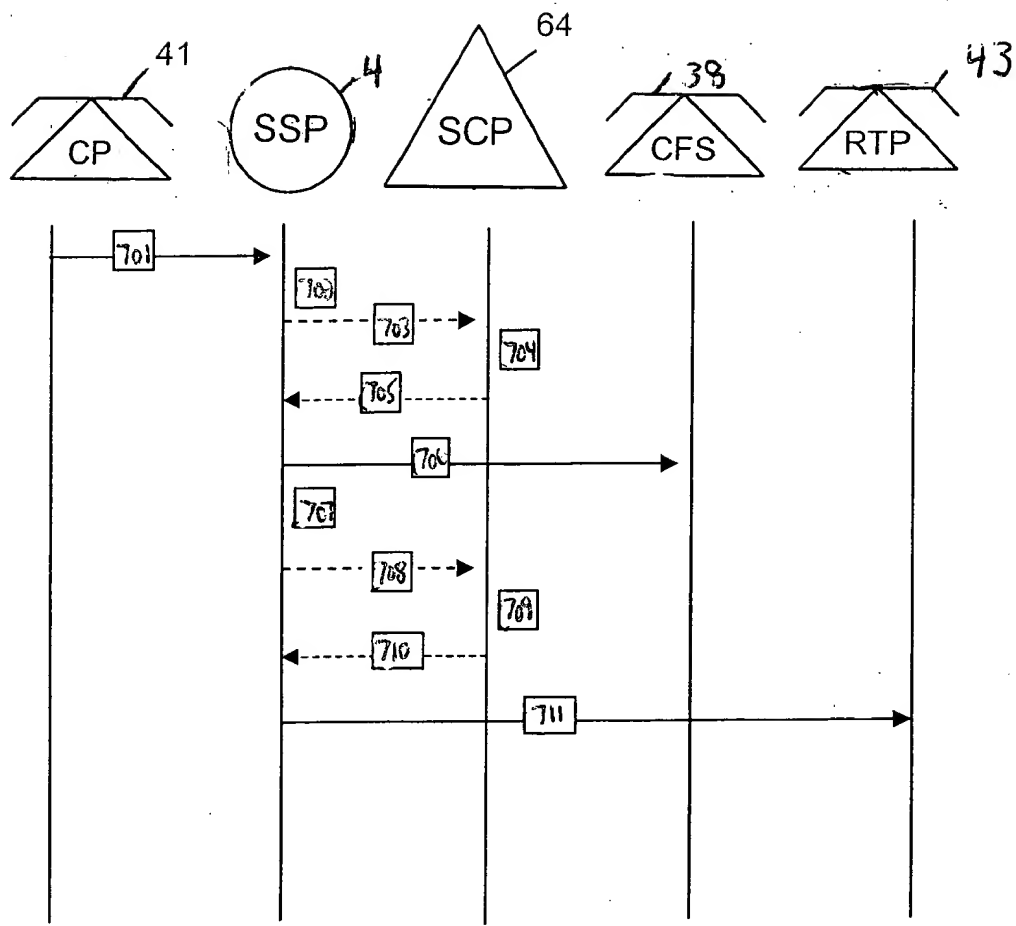

Figure 7

Figure 1 consists of two parts. The top part is a block diagram of a video transmission system. It shows a sequence of components: a CP (Control Plane) block (41), an SSP (Session Setup Protocol) block (4), an SCP (Session Control Protocol) block (64), a CFS (Content File System) block (39), and an RTP (Real-time Transport Protocol) block (43). The bottom part is a sequence diagram illustrating the interaction between these components. The diagram shows four vertical lifelines representing the components. The sequence of messages is as follows: 1. A message labeled 801 is sent from the CP lifeline to the SSP lifeline. 2. A dashed message labeled 802 is sent from the SSP lifeline to the SCP lifeline. 3. A solid message labeled 803 is sent from the SSP lifeline to the SCP lifeline. 4. A dashed message labeled 804 is sent from the SCP lifeline to the SSP lifeline. 5. A solid message labeled 805 is sent from the SCP lifeline to the CFS lifeline. 6. A dashed message labeled 806 is sent from the CFS lifeline to the SCP lifeline. 7. A solid message labeled 807 is sent from the CFS lifeline to the RTP lifeline. 8. A dashed message labeled 808 is sent from the RTP lifeline to the CFS lifeline. 9. A solid message labeled 809 is sent from the RTP lifeline to the CFS lifeline. 10. A solid message labeled 810 is sent from the CFS lifeline to the RTP lifeline. 11. A solid message labeled 811 is sent from the CFS lifeline to the RTP lifeline.
